

## **AMENDMENTS TO THE CLAIMS**

**This listing of claims will replace all prior versions and listings of claims in the application.**

### Listing of Claims:

Claim 1 (Currently Amended):                      A method comprising:

                  formulating a style sheet including color commands for presentation of one or more objects within a web page based on a color response of a display device associated with a client on a computer network, wherein the color response includes information relating to an actual gamma determined for the display device; and

                  communicating the style sheet via the computer network.

**Claim 2 (Original):** The method of claim 1, further comprising specifying a color value in the style sheet based on the color response of the display device.

Claim 3 (Currently Amended):            The method of claim 2, further comprising:  
         communicating the web page to the client; and  
         setting a color of one of the objects ~~an object~~ in the web page based on the  
color value in the style sheet.

Claim 4 (Currently Amended): The method of claim 3, wherein setting a color of one of the objects ~~an object~~ comprises setting at least one of a text color, a background color, a color of a table cell, and a color of a region of the web page.

Claim 5 (Original): The method of claim 3, further comprising:

setting a color of an image tagged in the web page based on the color response of the display device associated with the client; and

communicating the tagged image to the client.

**Claim 6 (Original):** The method of claim 5, further comprising:

generating a color profile based on the color response of the display device;

formulating the style sheet based on the color profile; and

setting the color of the image based on the color profile.

Claim 7 (Original): The method of claim 5, further comprising:

communicating the web page from a first server; and

communicating the tagged image from a second server.

Claim 8 (Original): The method of claim 5, further comprising:

communicating the web page from a first server; and

communicating the style sheet from a second server.

Claim 9 (Original): The method of claim 1, further comprising characterizing the color response of the display device by guiding the client through a color profiling process.

Claim 10 (Original): The method of claim 9, further comprising guiding the client through the color profiling process by delivering one or more color profiling web pages to the client.

Claim 11 (Currently Amended): The method of claim 9, further comprising:

generating a web cookie for the client including ~~containing~~ information representing a result of the color profiling process; and

communicating the web cookie to a server that communicates the style sheet.

Claim 12 (Original): The method of claim 11, further comprising formulating the style sheet at the server based on the contents of the web cookie.

Claim 13 (Original): The method of claim 12, further comprising:

communicating to the client an image tagged in the web page; and

setting the color of the image at the server based on the contents of the web cookie.

Claim 14 (Original): The method of claim 13, further comprising:  
communicating the web page to the client from a first server;  
storing the style sheet and the tagged image on a second server;  
communicating the tagged image to the client from the second server; and  
communicating the color profiling web pages to the client from a third  
server.

Claim 15 (Original): The method of claim 1, further comprising:  
communicating web pages to multiple clients on a computer network; and  
formulating customized style sheets for the web pages based on the color  
responses of display devices associated with each of the clients.

Claim 16 (Currently Amended): A computer-readable medium including  
~~containing~~ instructions that cause a programmable processor to:  
formulate a style sheet including color commands for presentation of one  
or more objects within a web page based on a color response of a display device  
associated with a client on a computer network, wherein the color response  
includes information relating to an actual gamma determined for the display  
device; and  
communicate the style sheet via the computer network.

Claim 17 (Original): The computer-readable medium of claim 16, wherein the  
instructions cause the processor to specify a color value in the style sheet based on  
the color response of the display device.

Claim 18 (Currently Amended): The computer-readable medium of claim 16,  
wherein the instructions cause the processor to:  
communicate the web page to the client; and  
set a color of one of the objects ~~an object~~ in the web page based on the  
color value in the style sheet.

Claim 19 (Original): The computer-readable medium of claim 18, wherein the  
instructions cause the processor to:

set a color of an image tagged in the web page based on the color response of the display device associated with the client; and  
communicate the tagged image to the client.

Claim 21 (Original): The computer-readable medium of claim 20, wherein the instructions cause the processor to:

generate a color profile based on the color response of the display device;  
formulate the style sheet based on the color profile; and  
set the color of the image based on the color profile.

Claim 22 (Original): The computer-readable medium of claim 20, wherein the instructions cause the processor to:

communicate the web page from a first server; and  
communicate the tagged image from a second server.

Claim 23 (Original): The computer-readable medium of claim 20, wherein the instructions cause the processor to:

communicate the web page from a first server; and  
communicate the style sheet from a second server.

Claim 24 (Original): The computer-readable medium of claim 20, wherein the instructions cause the processor to characterize the color response of the display device by guiding the client through a color profiling process.

Claim 25 (Original): The computer-readable medium of claim 24, wherein the instructions cause the processor to guide the client through the color profiling process by delivering one or more color profiling web pages to the client.

Claim 26 (Currently Amended): The computer-readable medium of claim 24, wherein the instructions cause the processor to:

generate a web cookie for the client including ~~containing~~ information representing a result of the color profiling process; and  
communicate the web cookie to a server that communicates the style sheet.

Claim 27 (Original): The computer-readable medium of claim 26, wherein the instructions cause the processor to formulate the style sheet at the server based on the contents of the web cookie.

Claim 28 (Original): The computer-readable medium of claim 27, wherein the instructions cause the processor to:

- communicate to the client an image tagged in the web page; and
- set the color of the image at the server based on the contents of the web cookie.

Claim 29 (Original): The computer-readable medium of claim 28, wherein the instructions cause the processor to:

- communicate the web page to the client from a first server;
- store the styles sheet and the tagged image on a second server;
- communicate the tagged image to the client from the second server; and
- communicate the color profiling web pages to the client from a third server.

Claim 30 (Original): The computer-readable medium of claim 16, wherein the instructions cause the processor to:

- communicate web pages to multiple clients on a computer network; and
- formulate customized style sheets for the web pages based on the color responses of display devices associated with each of the clients.

Claim 31 (Currently Amended): A system comprising a color correction module that formulates a style sheet including color commands for presentation of one or more objects within ~~for~~ a web page based on a color response of a display device associated with a client on a computer network, wherein the color response includes information relating to an actual gamma determined for the display device.

Claim 32 (Original): The system of claim 31, further comprising a  
a first server that communicates the web page to the client; and  
a second server that communicates the style sheet to the client.

Claim 33 (Original): The system of claim 32, wherein the color correction  
module runs on the second server.

Claim 34 (Original): The system of claim 32, wherein the color correction  
module runs on a third server.

Claim 35 (Original): The system of claim 31, wherein the color correction  
module specifies a color value in the style sheet based on the color response of the  
display device.

Claim 36 (Currently Amended): The system of claim 31, wherein the client  
executes a web browser that sets a color of one of the objects ~~an object~~ in the web  
page based on the color value in the style sheet.

Claim 37 (Currently Amended): The system of claim 36, wherein the web  
browser sets a color of one of the objects ~~an object~~ by setting at least one of a text  
color, a background color, a color of a table cell, and a color of a region in the  
web page.

Claim 38 (Original): The system of claim 31, further comprising:  
a first server that communicates the web page to the client; and  
a second server that communicates to the client an image tagged in the  
web page,  
wherein the color correction module sets a color of the image based on the  
color response of the display device.

Claim 39 (Original): The system of claim 38, further comprising:  
a color profile server that generates a color profile based on the color  
response of the display device,

wherein the color correction module formulates the style sheet based on the color profile, and sets the color of the image based on the color profile.

Claim 40 (Original): The system of claim 31, further comprising a color profile server that characterizes the color response of the display device by guiding the client through a color profiling process.

Claim 41 (Original): The system of claim 40, wherein the color profile server guides the client through the color profiling process by delivering one or more color profiling web pages to the client.

Claim 42 (Currently Amended): The system of claim 41, further comprising a cookie server that generates a web cookie for the client including ~~containing~~ information representing a result of the color profiling process.

Claim 43 (Original): The system of claim 42, wherein the color correction module formulates the style sheet based on the contents of the web cookie.

Claim 44 (Original): The system of claim 42, further comprising an image server that communicates to the client an image tagged in the web page, wherein the color correction module sets the color of the image based on the contents of the web cookie.

Claim 45 (Original): The system of claim 31, further comprising:  
a web server that communicates the web page to the client,  
an image server that stores the style sheet and one or more images tagged in the web page, and a color profile server; and  
a color profile server that characterizes the color response of the display device by guiding the client through

Claim 46 (Original): The system of claim 31, further comprising a web server that communicates web pages to multiple clients on the computer network, wherein the color correction module formulates customized style sheets for the

web pages based on the color responses of display devices associated with each of the clients.

Claim 47 (Currently Amended): The method of claim 1, wherein the color response ~~responses~~ includes information relating to actual blackpoint and gray balance estimated for the display device.

Claim 48 (Previously Presented): The method of claim 47, further comprising guiding the client through a color profiling process to determine the blackpoint, gamma and gray balance for the display device.

Claim 49 (Previously Presented): The method of claim 47, wherein the style sheet specifies color customization of web page content based on the actual gamma determined for the display device.

Claim 50 (Previously Presented): The computer-readable medium of claim 16, wherein the color response includes information relating to actual blackpoint and gray balance estimated for the display device.

Claim 51 (Previously Presented): The computer-readable medium of claim 50, further comprising instructions to cause the processor to guide the client through a color profiling process to determine the blackpoint, gamma and gray balance for the display device.

Claim 52 (Previously Presented): The computer-readable medium of claim 50, wherein the style sheet specifies the color customization of web page content based on the actual gamma determined for the display device.

Claim 53 (Previously Presented): The system of claim 31, wherein the color response includes information relating to actual blackpoint and gray balance estimated for the display device.

Claim 54 (Previously Presented): The system of claim 53, further comprising a color profile server that guides the client through a color profiling process to determine the blackpoint, gamma and gray balance for the display device.

Claim 55 (Previously Presented): The system of claim 53, wherein the style sheet specifies color customization of web page content based on the actual gamma determined for the display device.

Claim 56 (Currently Amended): A method comprising:

- guiding a computer network clients through a color profiling process to estimate blackpoint and gamma values for display devices associated with the computer network clients;
- formulating style sheets for the computer network clients, wherein each of the style sheets specifies color customization of web page content based on the blackpoint and gamma values estimated for the display device associated with the corresponding computer network client;
- communicating the style sheets to the corresponding computer network clients; and
- communicating web pages to the computer network clients, wherein the computer network clients apply the style sheets to customize color of web page content to compensate for differences in blackpoint and gamma values among different display devices.

Claim 57 (New): The method of claim 1, wherein the objects include text, tables and boxes.

Claim 58 (New): The computer-readable medium of claim 16, wherein the objects include text, tables and boxes.

Claim 59 (New): The system of claim 31, wherein the objects include text, tables and boxes.
